

Installation of Pentaho Software

Author: Zhengtong Yan

This document provides details about downloading and installing Pentaho software:

- **Step 1. Install the Java Dependencies (JDK1.8, NOT JDK 11 or higher versions).**
- **Step 2. Set Up the Environment Variables.**
- **Step 3. Download and Install Pentaho Software**
 - ✧ **Pentaho Server**
 - ✧ **Pentaho Data Integration**
 - ✧ **Pentaho Schema Workbench**

Step 1: Install the Java Dependencies If Required

To run Pentaho, Java Runtime Environment and Java Development Kit are required. To check if you already have these installed, go to this path in your file explorer (for Windows system):

[C:\Program Files\Java](#) Or [C:\Program Files \(x86\)\Java](#)

If this folder exists and contains folders “jdk1.8.0_301” and “jre1.8.0_301” as follows, then you have the required files.

If this folder doesn't exist or you don't see one or both of these folders, then you need to download JDK 1.8. To download JDK 1.8, go to this link:

<https://www.oracle.com/java/technologies/javase/javase8u211-later-archive-downloads.html>

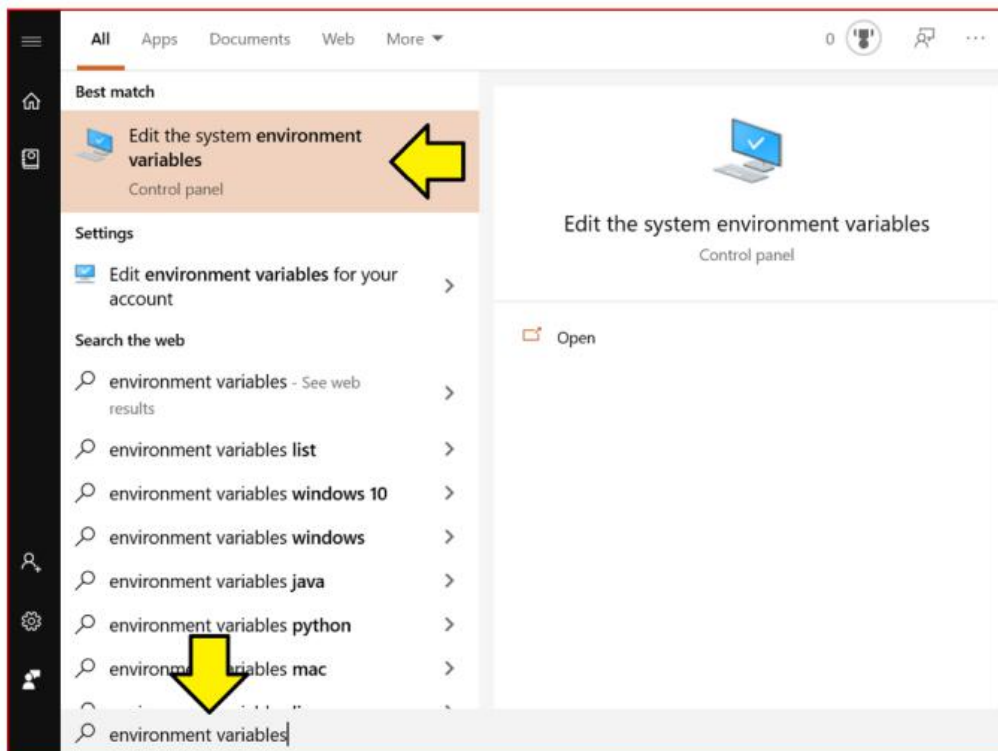

and download “jdk-8u301-windows-x64.exe”. You need an Oracle account to log in when downloading the JDK. After download the jdk, you run the installer to install JDK 1.8 and JRE 1.8. (Notice that JRE 1.8 is included in JDK 1.8, you will install JRE 1.8 when installing JDK 1.8). After successful installation, you can find the following two folders: “jdk1.8.0_301” and “jre1.8.0_301”

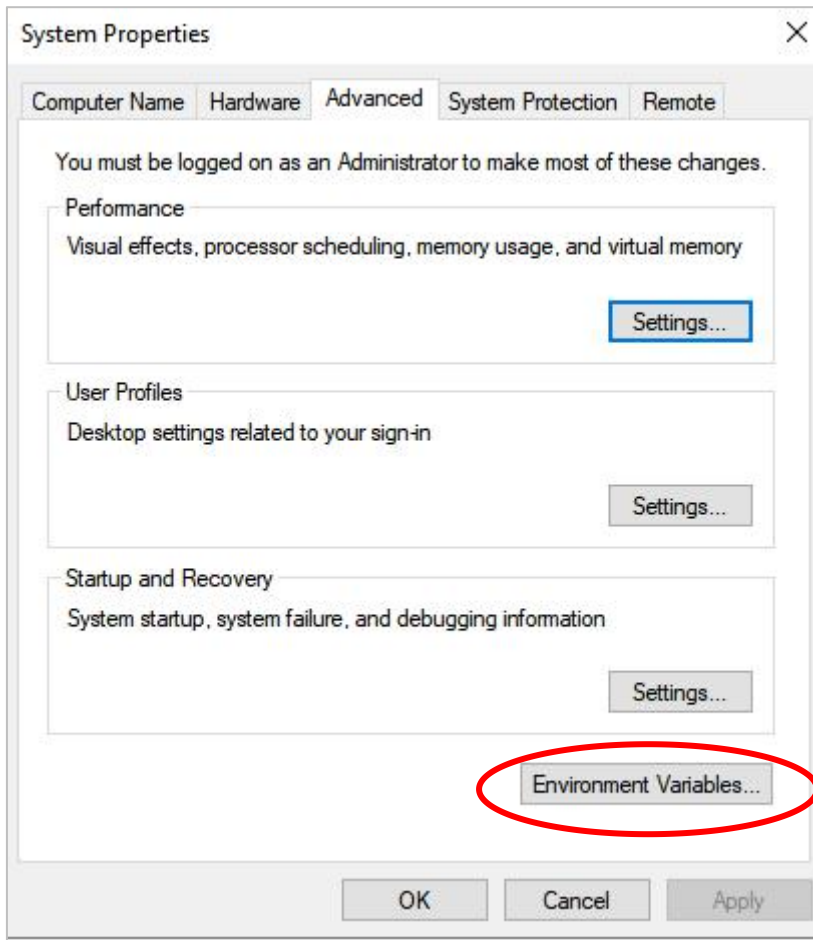

Computer > System (C:) > Program Files > Java				
	Name	Date modified	Type	Size
Quick access	jdk1.8.0_301	11/30/2021 00:44	File folder	
OneDrive	jdk-11	5/29/2020 20:36	File folder	
百度网盘	jre1.8.0_301	11/30/2021 00:44	File folder	

Step 2: Set Up the Environment Variables

The easiest way to open the environment variables menu is to type in “environment variables” in the Windows search bar like this:

Click the “Edit the system environment variables” option. That will open the “System Properties” window. Click the “**Environment Variables...**” button at the bottom.

That will open a window that looks like this:

Click the **“New...”** button under “System variables” and enter the following three new System variables:

- ✓ **PENTAHO_JAVA_HOME:** C:\Program Files\Java\jre1.8.0_301
- ✓ **PENTAHO_JAVA:** C:\Program Files\Java\jre1.8.0_301\bin\java.exe
- ✓ **JAVA_HOME:** C:\Program Files\Java\jdk1.8.0_301

New System Variable

Variable name: PENTAHO_JAVA_HOME

Variable value: C:\Program Files\Java\jre1.8.0_301

Browse Directory... Browse File... OK Cancel

New System Variable

Variable name: PENTAHO_JAVA

Variable value: C:\Program Files\Java\jre1.8.0_301\bin\java.exe

Browse Directory... Browse File... OK Cancel

New System Variable

Variable name: JAVA_HOME

Variable value: C:\Program Files\Java\jdk1.8.0_301

Browse Directory... Browse File... OK Cancel

Make sure your variable value file path is the same one on your computer.

Step 3: Download and Install Pentaho Software

(1) Download the software

You should install the community edition of Pentaho. The latest version (9.2.0.0) is available from the SourceForge website.

- Go to <https://sourceforge.net/projects/pentaho/>
- Click “Files” tab

Pentaho tightly couples data integration with business analytics in a modern platform that brings together IT and business users to easily access, visualize and explore all data that impacts business results. Use it as a full suite or as individual components that are accessible on-premise in the cloud or on-the-go (mobile). Pentaho Kettle enables IT and developers to access and integrate data from any source, and deliver it to your business applications, all from within an intuitive and easy to use graphical tool.

- Click “Pentaho-9.2” folder

(2) Install Pentaho Server

- Unzip the downloaded “[pentaho-server-ce-9.2.0.0-290](#)” file to any folder, you will get a [pentaho-server](#) folder.
- Windows users should copy the folder “[pentaho-server](#)” to the folder [C:\Program Files\Pentaho](#). Mac and Linux users (including Oracle Virtual Box) may move the file to any folder.
- Run the file [start-pentaho.bat](#) by double clicking on it. If you get a permission error or cannot execute the bat file, you should right click and select “Run as Administrator”. For Mac and Linux users, run the [start-pentaho.sh](#) from terminal

A window will be open as follows:

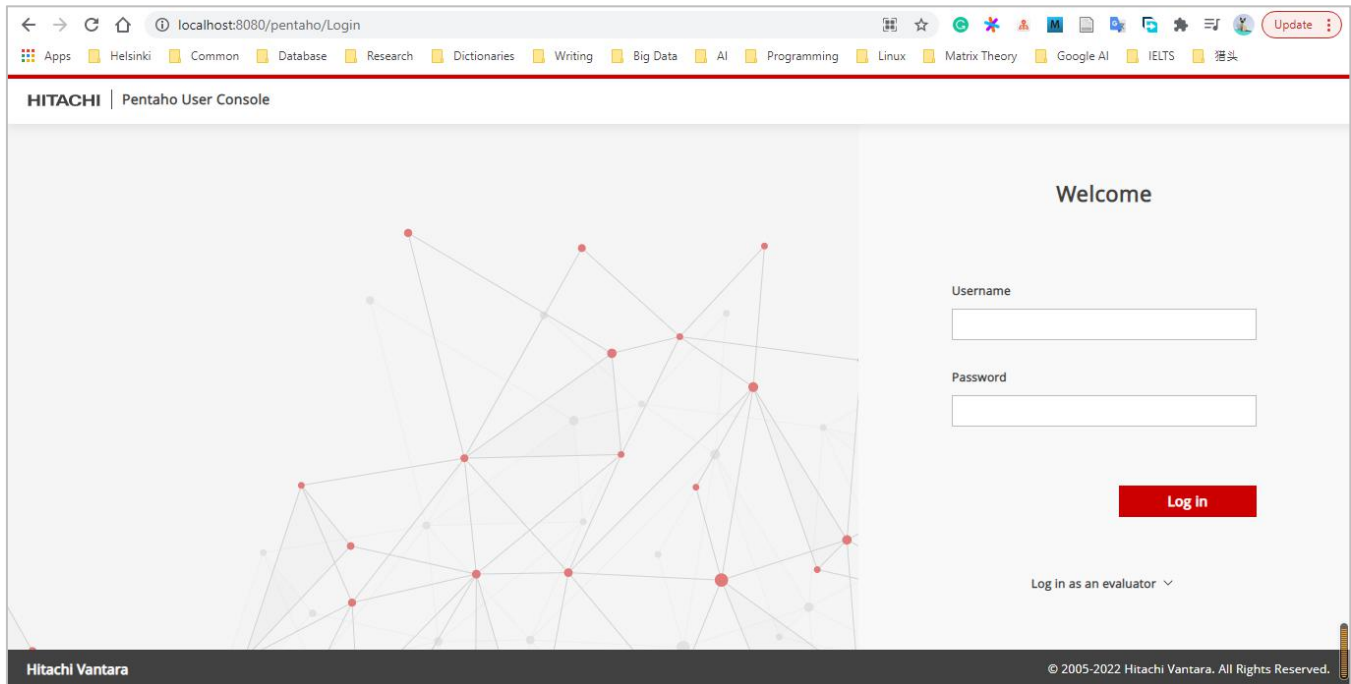

```

Open a browser and input: <http://localhost:8080/pentaho> to open the Pentaho User Console as follows:

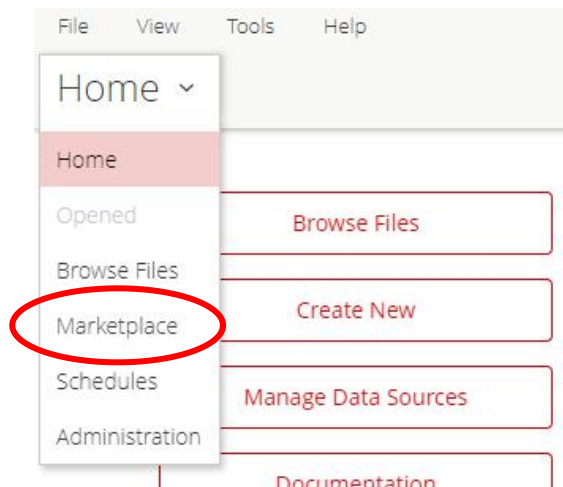

Input the username and password as follows:

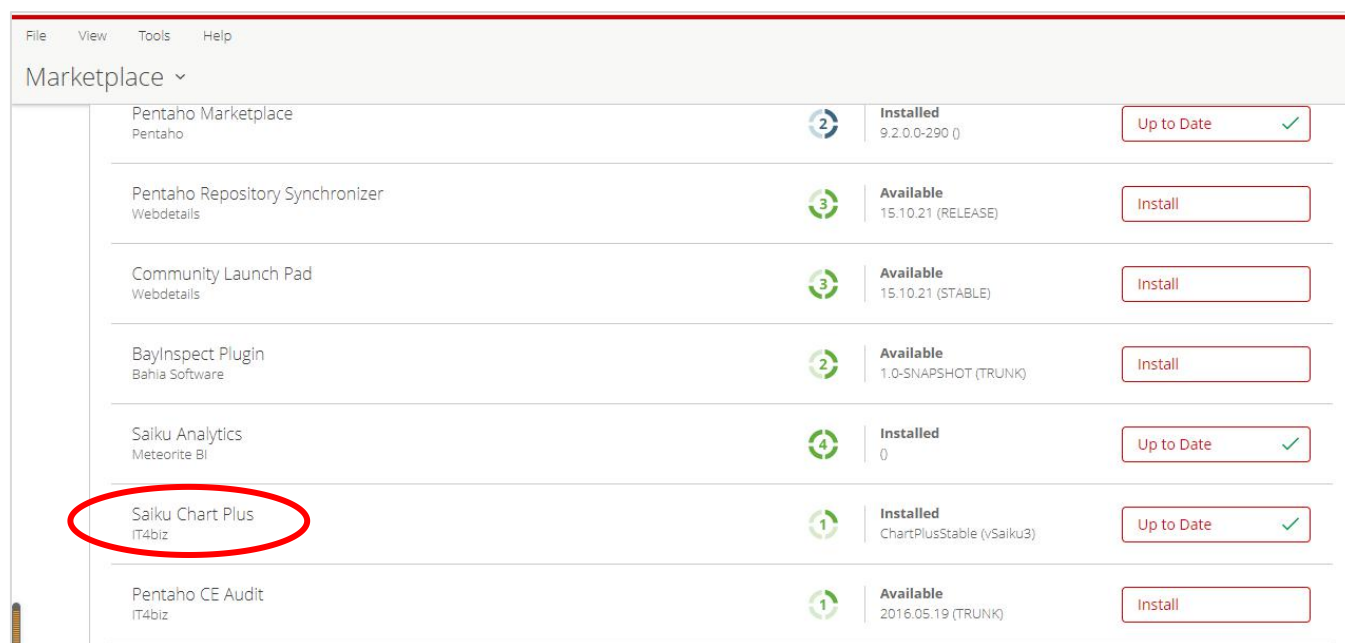

- Username: [admin](#)
- Password: [password](#)

- Click Home Menu and then click “Marketplace”

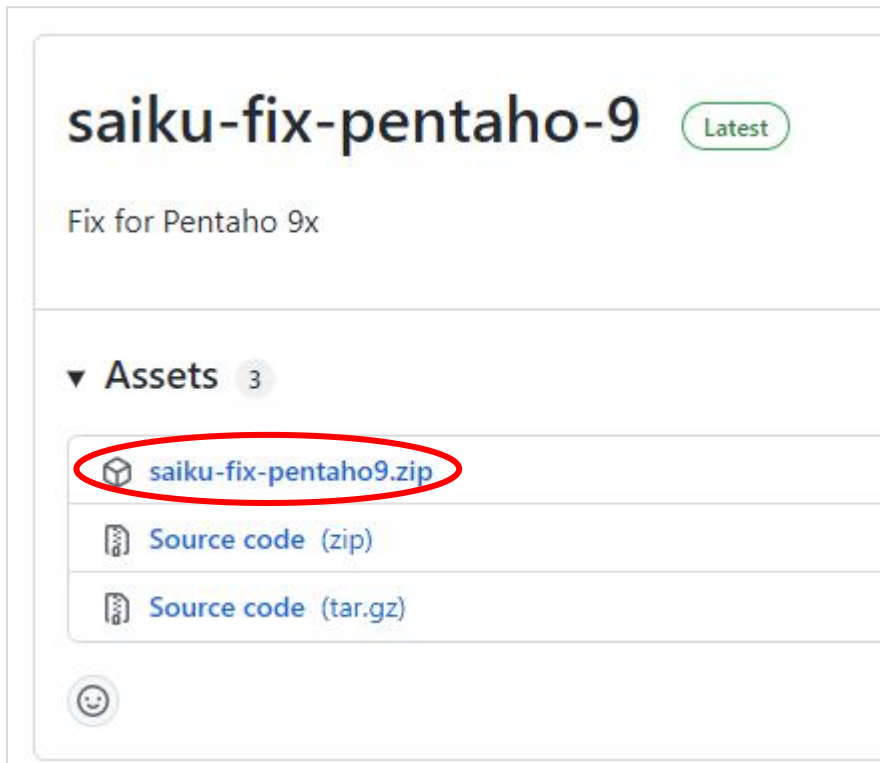

- In the opened window, click the install button of “[Saiku Chart Plus](#)” to install this tool.

Notice that the Pentaho Community Edition does not support “Saiku Analytics” free, so we cannot directly install in this window.

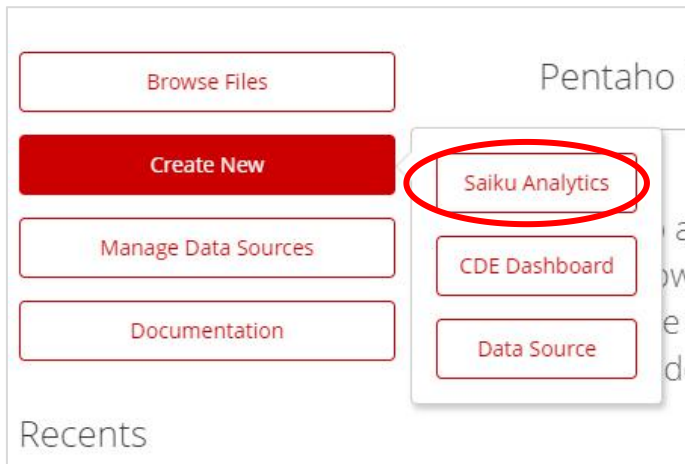

- Download Saiku Analytics from <https://github.com/ambientelivre/saiku-fix/releases>, click [saiku-fix-pentaho9.zip](#) to download the file.

- Unzip the downloaded “[saiku-fix-pentaho9.zip](#)” file to any folder, you will get a [saiku](#) folder.
- Copy the folder [saiku](#) to the folder `C:\Program Files\Pentaho\pentaho-server\pentaho-solutions\system`.

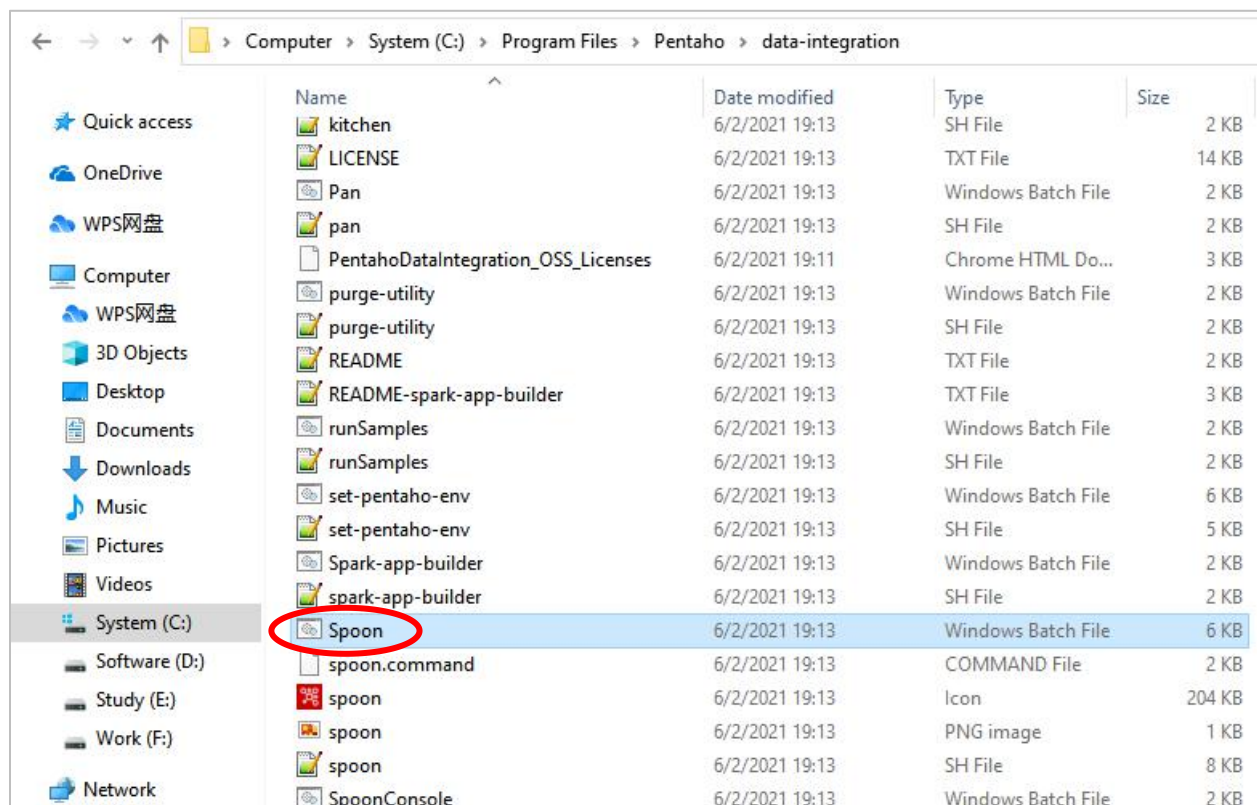

- Restart the Pentaho Server and login into the User Console, click “Create New” button, you will see [Saiku Analytics](#), this means that you have successfully installed Saiku.

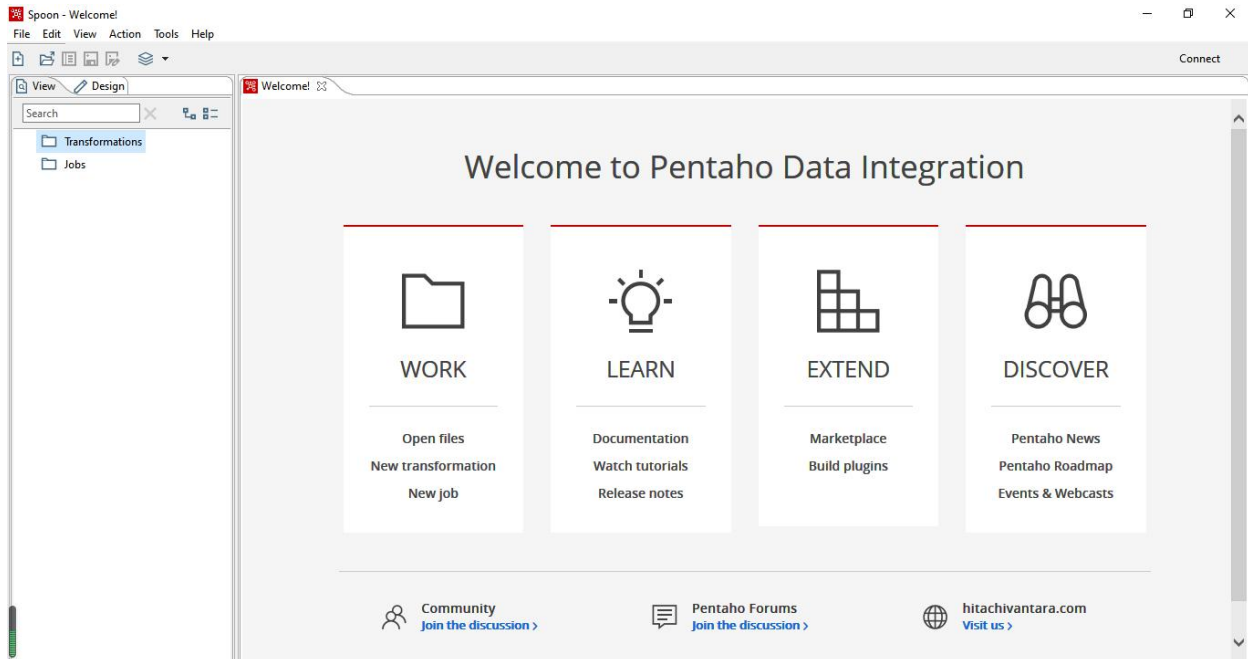

(3) Install Pentaho Data Integration

- Unzip the downloaded “[pdi-ce-9.2.0.0-290.zip](#)” file to any folder, you will get a [data-integration](#) folder.
- Windows users should copy the folder “[data-integration](#)” to the folder [C:\Program Files\Pentaho](#). Mac and Linux users (including Oracle Virtual Box) may move the file to any folder.
- Run the file [Spoon.bat](#) by double clicking on it. If you get a permission error or cannot execute the bat file, you should right click and select “Run as Administrator”. For Mac and Linux users, run the [Spoon.sh](#) from terminal.

- After you launch Pentaho Data Integration, you will see the Welcome window and then the Spoon designer.

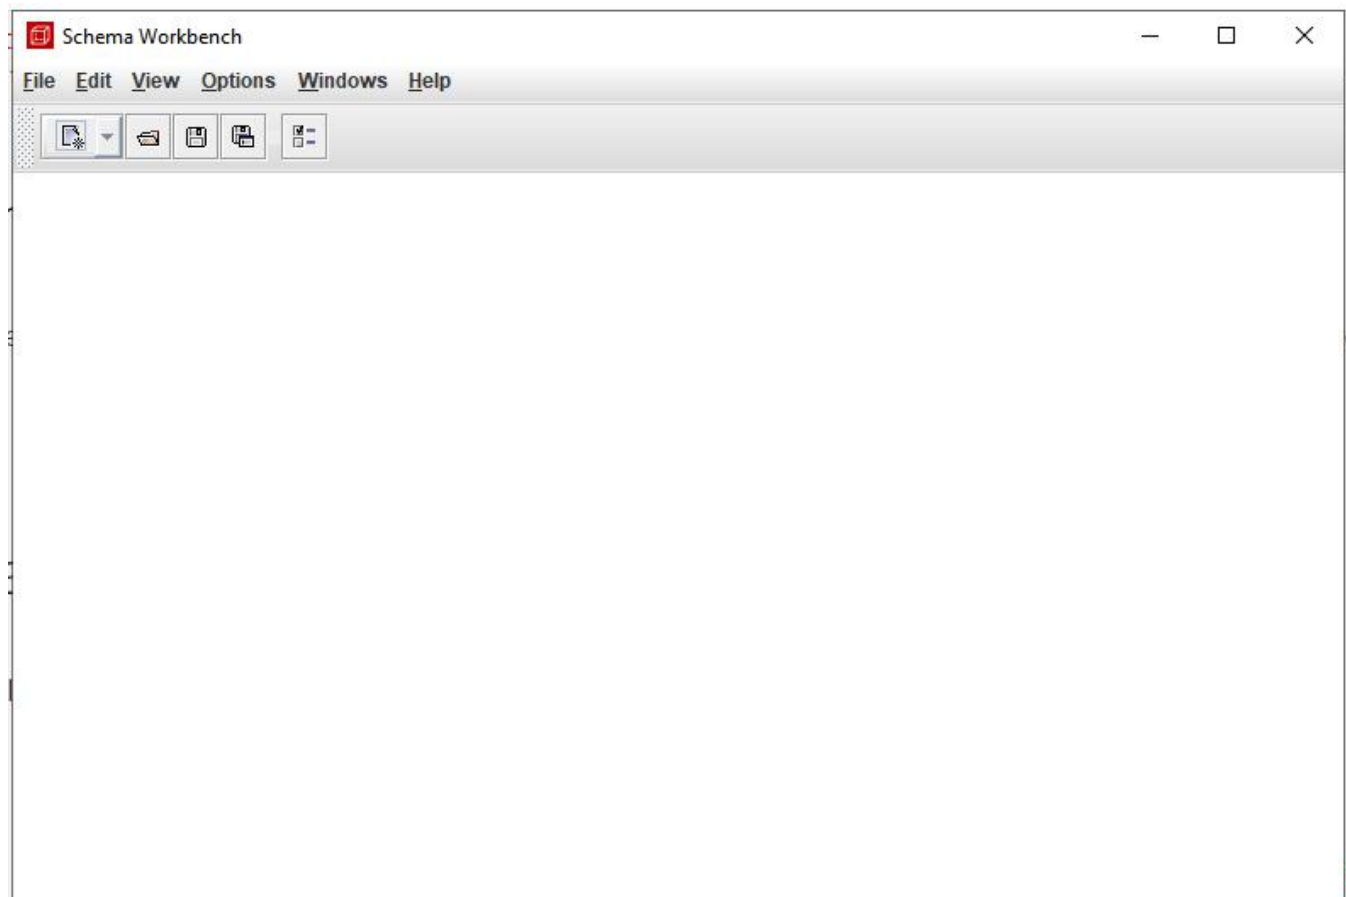

(4) Install Pentaho Schema Workbench

- Unzip the downloaded “[psw-ce-9.2.0.0-290](#)” file to any folder, you will get a [schema-workbench](#) folder.
- Windows users should copy the folder “[schema-workbench](#)” to the folder [C:\Program Files\Pentaho](#). Mac and Linux users (including Oracle Virtual Box) may move the file to any folder.
- Copy the [postgresql-42.2.5.jar](#) file from “[C:\Program Files\Pentaho\data-integration\lib](#)” to “[C:\Program Files\Pentaho\schema-workbench\lib](#)”
